

Supplemental Figure Legend:

Figure S1. Evolution of composite nutritional score in patients starting hemodialysis.

Mean percentile of nutritional score over 54 months after initiation of dialysis is shown.

Error bars denote 95% confidence intervals. Inlay plot indicates number of available data records for each month.

Figure S2. Evolution of composite nutritional score in patients starting hemodialysis

without residual renal urea clearance. Mean percentile of nutritional score over 24

months after initiation of dialysis is shown. Error bars denote 95% confidence intervals.

Inlay plot indicates number of available data records for each month.

Figure S3. Supplemental figure to Figure 2, showing the number of included records per

month in each of the survival time categories.
