Complement Factor H–Related Protein 1 Deficiency and Factor H Antibodies in Pediatric Patients with Atypical Hemolytic Uremic Syndrome
Johannes Hofer, Andreas R. Janecke, L.B. Zimmerhackl, Magdalena Riedl, Alejandra Rosales, Thomas Giner, Gerard Cortina, Carola J. Haindl, Barbara Petzelberger, Miriam Pawlik, Verena Jeller, Udo Vester, Bettina Gnadner, Michael van Husen, Michael L. Moritz, Reinhard Würzner, and Therese Jungraithmayr, for the German-Austrian HUS Study Group

Lymphopenia and Treatment-Related Infectious Complications in ANCA-Associated Vasculitis
Rémi Goupil, Soumeya Brachemi, Annie-Claire Nadeau-Fredette, Clément Déziel, Yves Troyanov, Valery Lavergne, and Stéphan Troyanov

Association of Arterial Rigidity with Incident Kidney Disease and Kidney Function Decline: The Health ABC Study
Magdalena Madero, Carmen Peralta, Ronit Katz, Robert Canada, Linda Fried, Samer Najjar, Michael Shlipak, Eleanor Simonsick, Edward Lakatta, Kushang Patel, Dena Ritkin, Marquis Hawkins, Anne Newman, and Mark Sarnak, for the Health ABC Study

Combined Association of Creatinine, Albuminuria, and Cystatin C with All-Cause Mortality and Cardiovascular and Kidney Outcomes
Salman Waheed, Kunihiro Matsushita, Brad C. Astor, Ron C. Hoogeveen, Christie Ballantyne, and Josef Coresh

Comparison Analysis of Nutritional Scores for Serial Monitoring of Nutritional Status in Hemodialysis Patients
Ilia Beberashvili, Ada Azar, Inna Sinuani, Hadas Kadoshi, Gregory Shapiro, Leonid Feldman, Zhan Averbukh, and Joshua Weissgarten

Low Plasma α-Tocopherol Concentrations and Adverse Clinical Outcomes in Diabetic Hemodialysis Patients
Katharina M. Espe, Jens Raila, Andrea Henze, Katja Blouin, Andreas Schneider, Daniel Schmiedeke, Vera Krane, Stefan Pilz, Florian J. Schweiger, Berthold Hocher, Christoph Wanner, and Christiane Drechsler, for the German Diabetes and Dialysis Study Investigators

Serum Adiponectin Levels and Mortality after Kidney Transplantation
Ahsan Alam, Miklos Z. Molnar, Maria E. Czira, Anna Rudas, Akos Ujjaszasi, Kamyar Kalantar-Zadeh, Laszlo Rosivall, and Istvan Mucsi
On the Cover
What’s the diagnosis? Dysmorphic red blood cells in a patient with a proliferative glomerulonephritis (400× magnification). The presence of dysmorphic red blood cells may be helpful in differentiating glomerular bleeding from extrarenal bleeding from a urothelial source. With urothelial bleeding the red blood cells are typically uniform and round, appearing similar to their appearance on a peripheral blood smear. Dysmorphic red blood cells, as seen in this image, are characterized by blebs, budding and marked variability in size and shape due to segmental loss of membrane. It is thought that the morphologic damage to the red blood cells results from mechanical trauma as they pass through breaks in the glomerular basement membrane. The presence of >5% acanthocytes (dysmorphic red blood cells characterized by ring forms with vesicular protrusions) is thought to be >95% specific for glomerular bleeding. (Image and text provided by Paul M. Palevsky, MD, FASN, Renal Section, VA Pittsburgh Healthcare System and Renal-Electrolyte Division, University of Pittsburgh School of Medicine, Pittsburgh, PA)
